

Assembly Instructions

1. Position the Peak on the ground, so that the stabilizing foot at the base of the unit can be turned to a 90° angle. This insures balance and stability.
2. Remove the mast from the carrying case.
3. Insert the mast into the hole located on the center of the casing.
4. Extend the mast to one of three standard height settings that match the size of your graphic.
5. Unroll the graphic from the Peak by pulling on the aluminum hanger. The hanger has a center cap designed to go over the top of the mast.
6. Place the cap on the hanger over the top of the mast.

Lighting

7. Install the lamp by inserting the mounting pin in the top of the mast.

Recommendation

After use, when rolling the graphic back inside the casing, make sure to guide it manually in order to avoid any damage to the edges.
